

Aligning Technology to Strategy through Enterprise Architecture

Enterprise Architecture - Case Study

Company: Financial Exchange Company

Project: Enterprise Architecture

Year: 2015

The Business Challenge

Multiple technologies that are expensive to operate and maintain.

Various business processes not optimally enabled by technology

Unable to align the many technologies and processes to deliver against the business strategy

The Goal

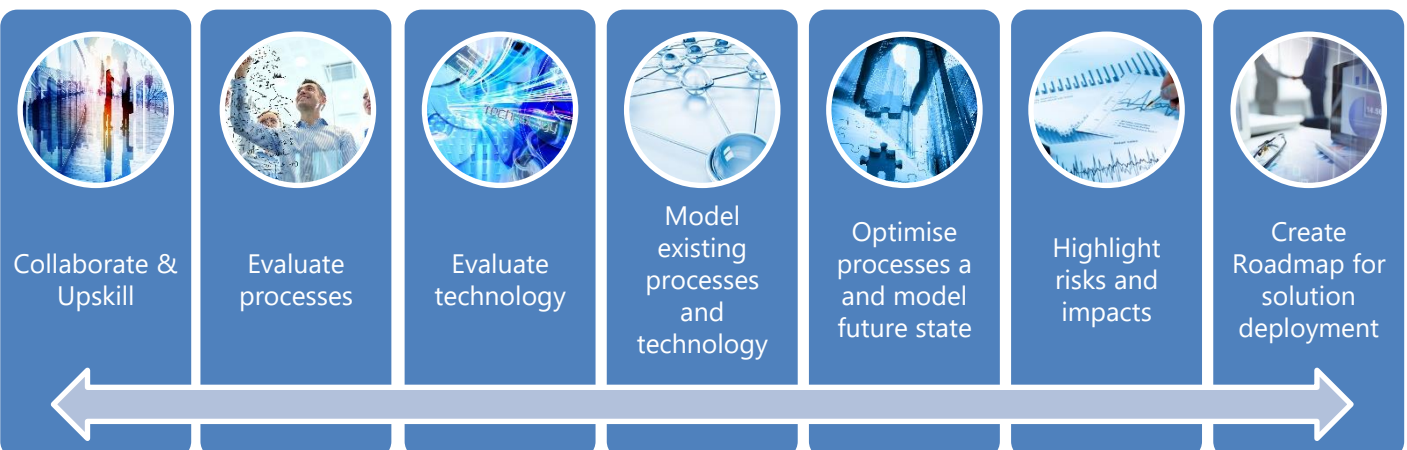

Consolidate and streamline technology and processes to reduce costs

Simplify and integrate business processes to improve productivity and reporting

Reduce the number of non-standard business functions

Implement changes without disruption to business

Our Approach

The Solution

A model showing an optimised future state of processes and technology, with risks and mitigation suggestions.

A roadmap for the implementation of the solution

The Value

Clear understanding of how to meet strategic business objectives

Comprehensive plan to design and deploy a technology evolution solution

Highlighted risks and impacts

Socialised of the concept for greater project implementation success
